Introduction to npm

Task 1 – installing and running SASS with npm

Working from slide 18 of the npm lecture note use Node to run test.js and then use npm to install SASS on your G drive. Then use it to compile SASS to CSS from the node command prompt as shown in the lecture and the notes. You do not need to upload or submit this but make sure this system is all working otherwise you will not be able to progress.

IMPORTANT

This task is **NOT** one of the weekly uploads that will be marked, but it is essential that you check node and npm are working ok and that you can run these basic commands.

If in doubt, contact me
